

Pathology sites vs therapeutic-stimulation sites: where the read-out deviates most is not where single-site resonant stimulation is most effective
(N=40 AD; ΔW = per-patient top-5 read-out correction magnitude; LDA-resonant = per-patient top-1 site, chosen by its effect on the disease discriminant under resonant drive)

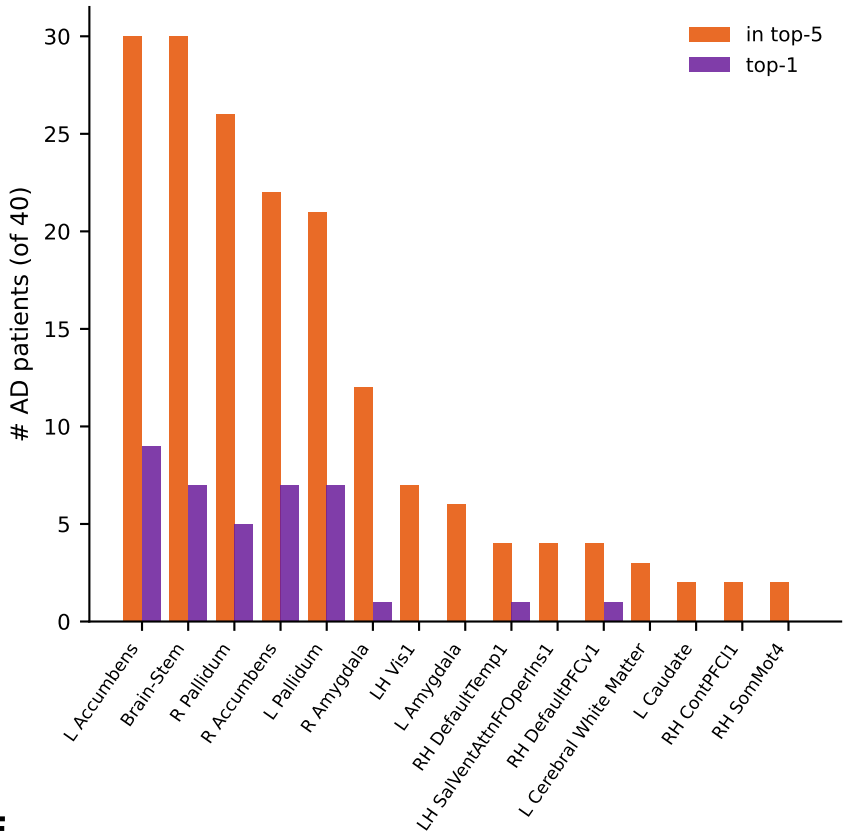

A

Pathology: ΔW top-5 sites

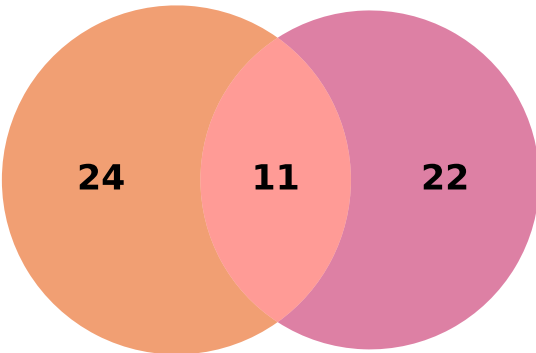

B

Pathology: site-selection frequency

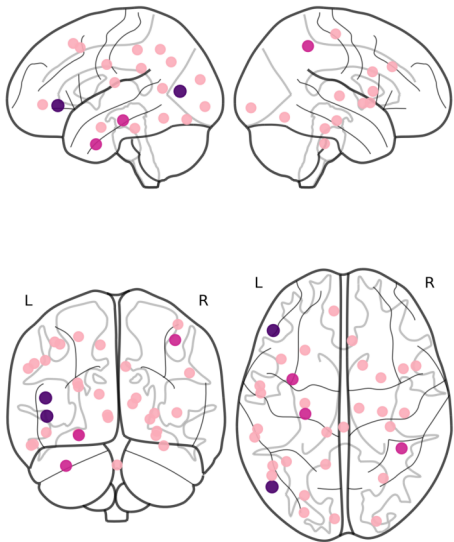

C

Pathology vs therapy sites largely disjoint

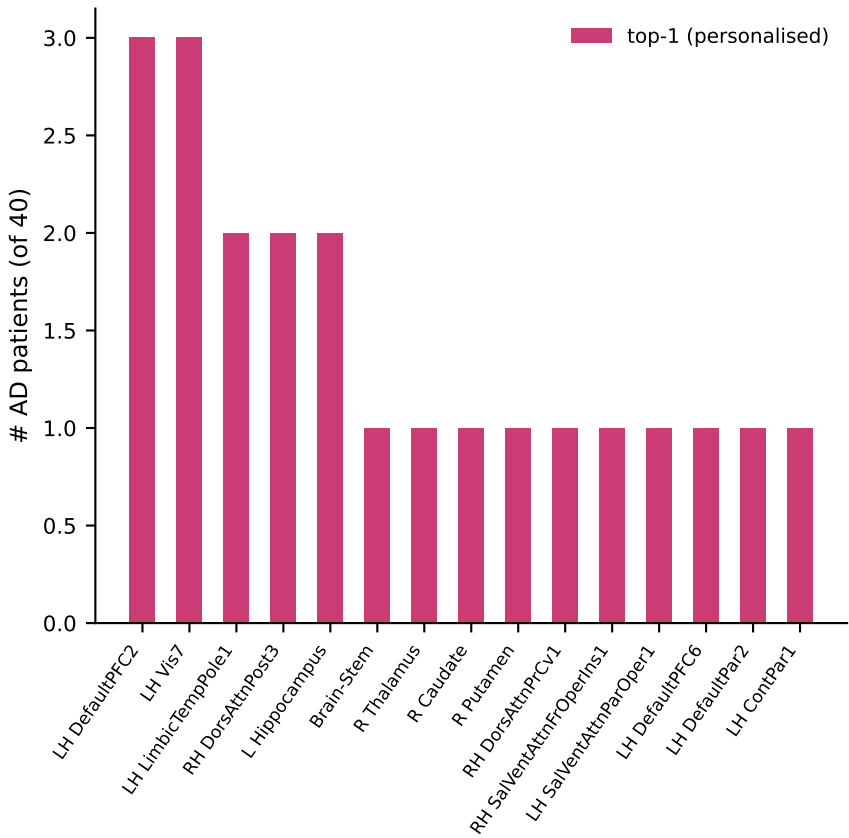

D

Therapy: LDA-resonant top-1 sites

E

Therapy: site-selection frequency

ΔW pathology sites (top-5 union, N=35)

LDA-resonant therapy sites (top-1, N=33)
