

CC vs AD classification: G-space geometry vs. lagged-FC of reconstruction, with a nested-CV tangent-space FC-SVM benchmark
 (reservoir read-outs: per-patient W, LDA & RF, repeated 5-fold 80/20 CV, N=36 CC + 40 AD; dotted band = tangent-FC benchmark)

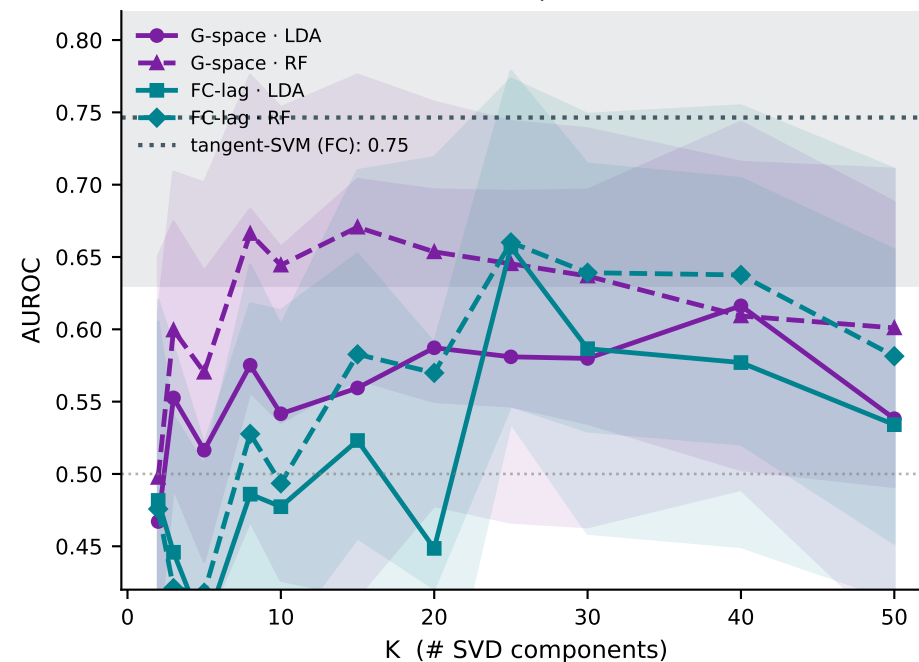

A

Accuracy vs. # SVD components ($\sigma = 0.007$)

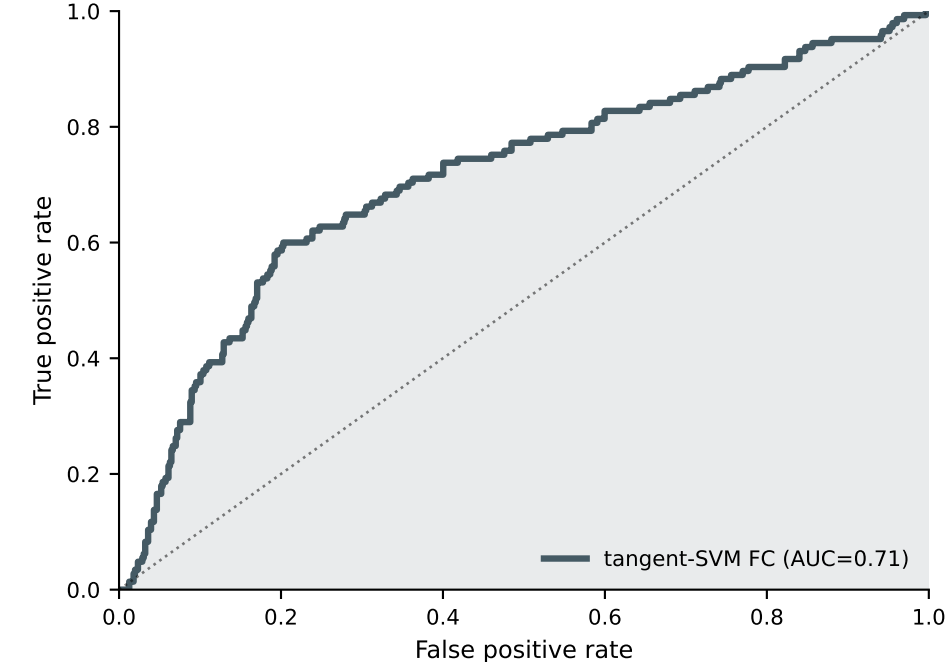

B

AUROC vs. # SVD components ($\sigma = 0.007$)

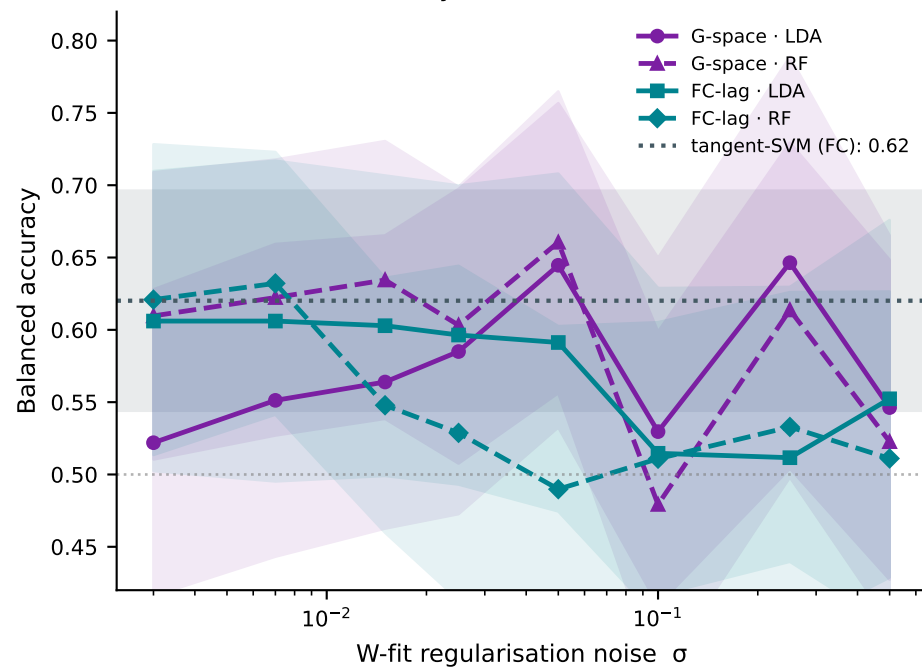

E

Tangent-space FC benchmark --- ROC
 (nested 5×5 patient-level CV)

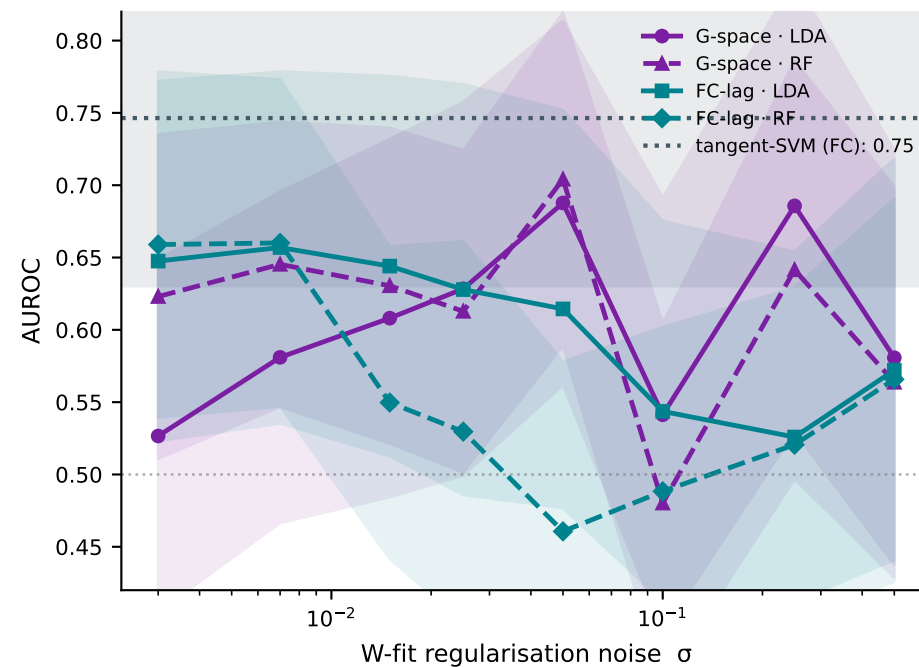

C

Accuracy vs. noise ($K = 25$)

D

AUROC vs. noise ($K = 25$)

F

CC vs AD point clouds
 (2-D PCA of FC features)
